

# PELICANS COLOURING

## CREATURE REPORT

### Pelicans:

-  Pelicans have large pouches on their throats that they use to scoop up fish.
-  Some pelican species are famous for "plunge feeding": diving into the water from the air after their prey.

-  Pelicans, like other seabirds, will sometimes mistake bits of floating plastic for food, which is detrimental to their health.

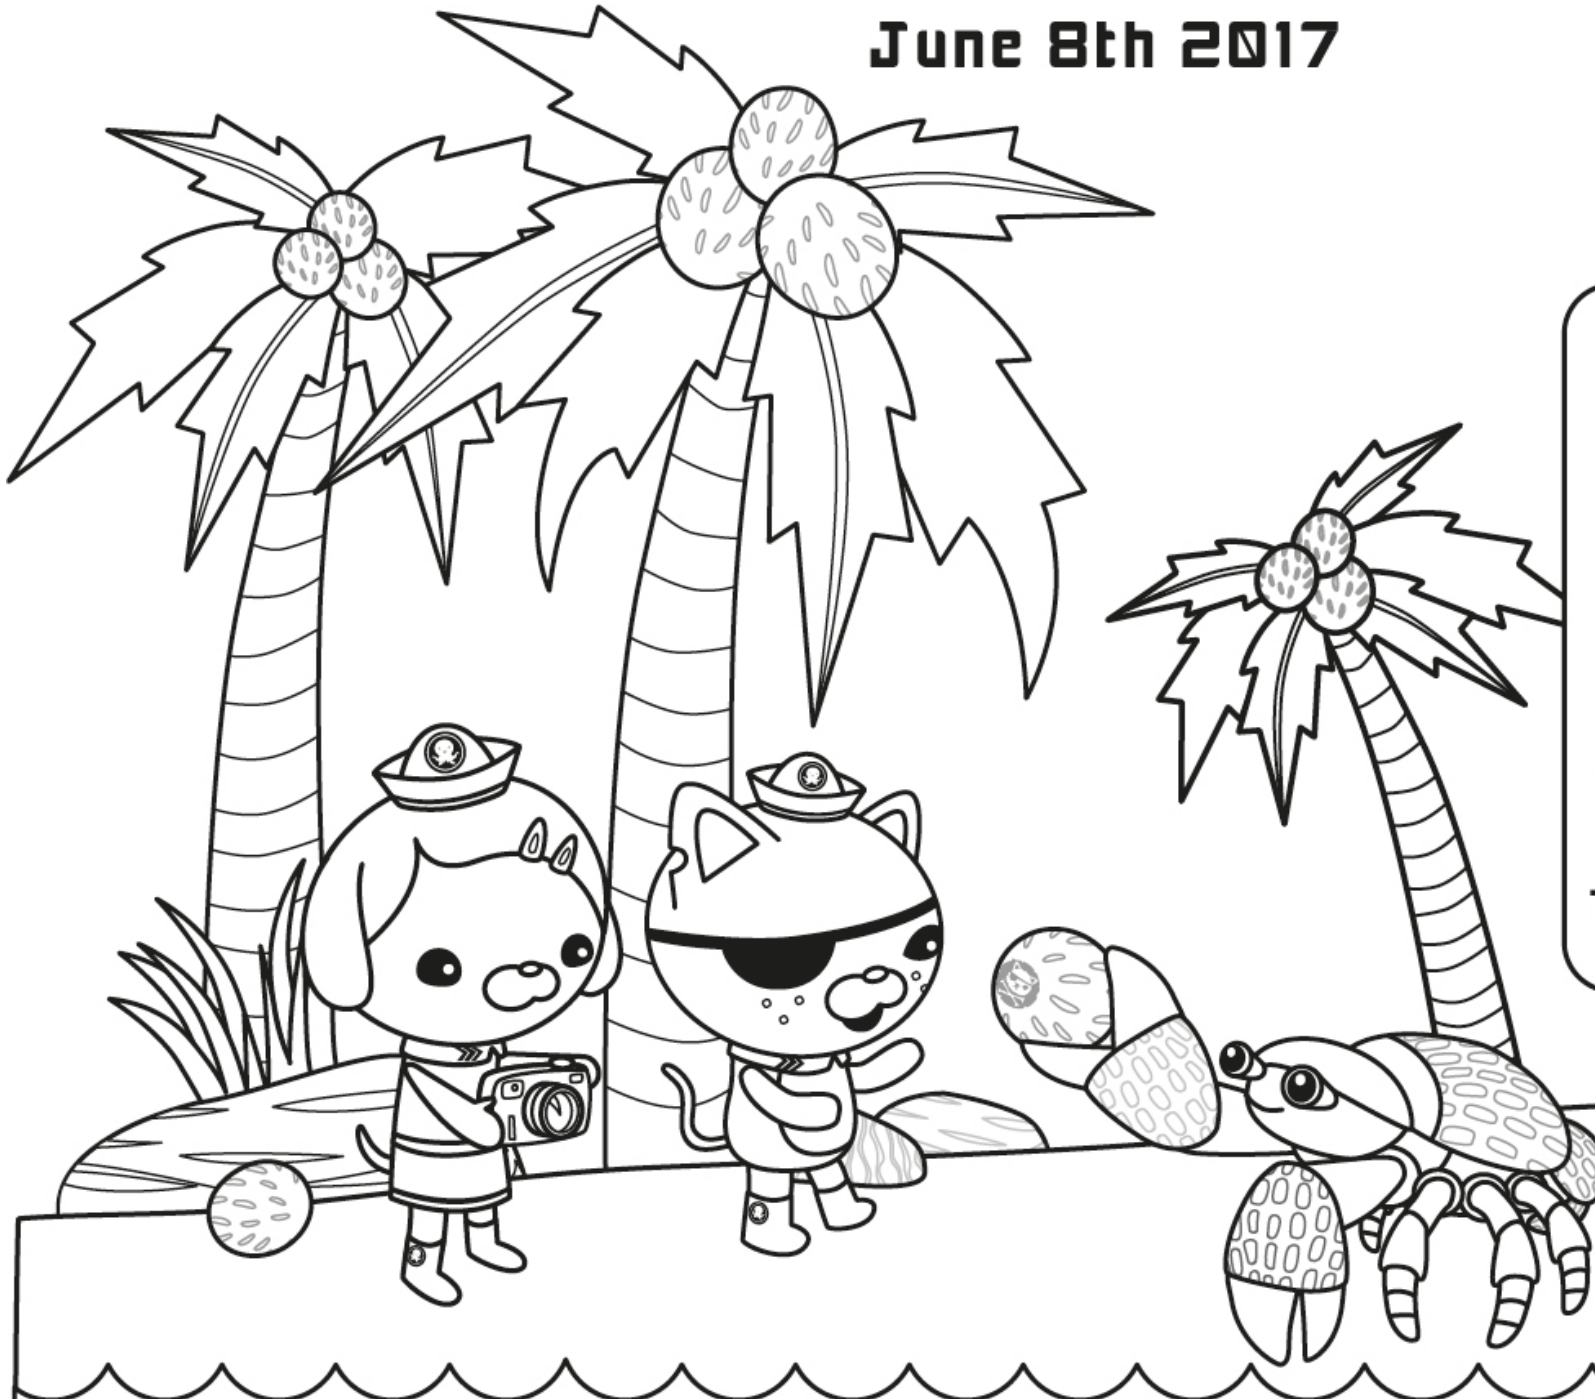

-  Things like beach toys, plastic cutlery, bottle tops and six-pack wrappers can hurt marine wildlife.
-  We can help ocean animals by choosing items, like reusable bags and water bottles instead of disposable plastic ones.
