

SEPTEMBER - 2019

The only way to save a rhinoceros is to save the environment in which it lives, because there's a mutual dependency between it and millions of other species of both animals and plants.

- David Attenborough

Did you know?

- The world is home to five species of rhinoceros – black and the white rhinoceros, which live in the savannas of Africa, and Sumatran, Javan and Indian rhinoceros live in the tropical forests and swamps of Asia.
- Javan and Indian rhinoceros have one horn, whereas the others have two.
 - The black, Javan and Sumatran rhinoceros are critically endangered on the IUCN list, while the white is near threatened and the Indian is marked vulnerable.
- A sub-species of the black rhino, the western black rhino recently became extinct.
