

# Capricornus – The Goat

## DECEMBER - 2020

### Did you know?

- Capricornus, often called Capricorn, is also known as 'The Sea Goat', a mythical creature that is half goat, half fish.
- Capricornus has several galaxies and star clusters, including Messier 30 and a spiral galaxy group.
- Deneb Algedi is the brightest star in the constellation and its name is derived from Arabic and translates to 'the tail of the goat'.
- Capricornus can be seen from July to November and the area of the night sky in which it is located is known as the Sea.
- There are five meteor showers associated with Capricornus: the Alpha Capricornids, the Chi Capricornids, the Sigma Capricornids, the Tau Capricornids, and the Capricorniden-Sagittarids.
