# GIVE GREEN A CHANCE

Avocados and grapes, emerald and jade

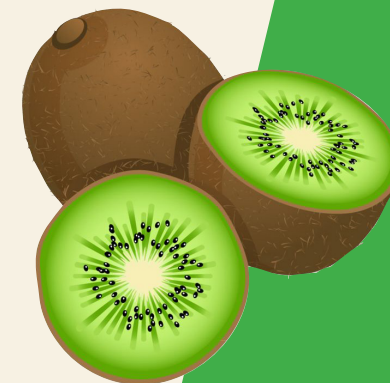

A grasshopper in the sun, a caterpillar in the shade

Green is the colour of plants, trees and more

Of Hulk, Shrek, Gamora, and Yoda... superheroes galore!

## DID YOU KNOW?

- Green is the most common colour in the natural world. It symbolises growth, renewal and fertility.
- Most plants and leaves are green due to the presence of chlorophyll, which is essential for photosynthesis.
- The colour is also associated with safety. That is why the 'Go' signal in traffic lights and emergency exit signs are green.
- Green is one of the rarest eye colours in humans. Only about 2% of the world's population has green eyes.
- Photographers and filmmakers use green screens and green backgrounds to create special effects in movies and photography.
- A green room is a backstage area where performers relax before going on stage.
