DON'T FROWN, IT'S BROWN

Delicious chocolate and piping hot coffee

Online shopping packages that make you go 'yippee!

Brown is the earth where life begins to grow

And muddy puddles, where you splash to and fro

DID YOU KNOW?

- Brown is often associated with nature and the earth because it's the colour of soil, tree bark, and autumn leaves. It's considered a grounding colour.
- While common in soil and wood, brown is relatively rare as a natural colour in animals and plants. It's often the result of blending other pigments, such as red, black, or yellow.
- Brown is the most common eye colour worldwide, with about 55% to 79% of the world's population having brown eyes due to high melanin levels in the iris.
- Brown is often described as a comforting, secure, and reassuring colour. It evokes feelings of warmth, relaxation, and safety, often reminding people of home and natural surroundings.
